

See the quality on **your own data** before you commit.

Send us a small sample and your guidelines. Our managed team labels it, checks it against your spec, and shares the results. No cost, no contract, no new software.

How the pilot works

01

Share a sample

Send a small batch of your data and your labelling instructions, in your tool or ours. We sign an NDA before anything is shared.

02

We label & review

The sample goes through our full three-layer QA process, exactly as it would in production. Unclear cases are flagged, not guessed.

03

You decide

You get the labelled data and a quality report, then a clear quote with scope, turnaround and pricing. Scale up only if it works for you.

What you get

- **Your labelled sample**, delivered in your format or tool
- **A quality report** showing how the work tracked against your spec
- **Guideline feedback**: the edge cases and ambiguities we found
- **A clear quote** for production, scope and turnaround agreed

Every task, three sets of eyes

Annotator

Reviewer

QA lead

- **Tool-agnostic**: CVAT, Labelbox, Encord-style platforms or your in-house tools
- **Time-zone overlap** with Europe and the Middle East (EAT, UTC+3)
- **Data handled with care**: NDA and restricted access

What we can pilot

Bounding boxes & polygons

Segmentation & keypoints

Video tracking

Video slicing & clip segmentation

LiDAR / 3D point clouds

Classification & NER

Transcription & translation

Swahili & African languages

RLHF preference ranking

Rubric grading & red-teaming

Dataset QA & re-labelling

After the pilot

\$6–8 /hr

Managed annotation teams, layered QA included

\$10–15 /hr

RLHF raters & model evaluators

Per object

Computer vision, quoted by type and complexity

Final rates depend on task complexity and are confirmed after your pilot.

Start your free pilot

Reply with a sample and your guidelines, and we'll send a pilot plan.
